

PRODUCT OVERVIEW · LAUNCHING AUGUST 1

© Crypto Signal Deck

Crypto signals you can check the homework on.

Every day it scores your coins on momentum, trend, relative strength and on-chain valuation — then a robot **paper-trades a virtual \$10,000 by those exact rules**, and the full track record is published for anyone to audit. Losers included.

Information, not investment advice. Crypto Signal Deck is a research tool. Cloud Pro Advisor is not a registered investment adviser or broker-dealer. Crypto is extremely volatile — decisions are yours, at your own risk. All trading in the app is paper-only; it holds no exchange keys and can never place a real order.

Crypto never sleeps — and it punishes guesswork

Coins trade 24/7. Trends form and break while you're asleep, and most crypto tools respond with either hype or a wall of indicators. **Crypto Signal Deck does something rarer: a small, research-backed scorecard, applied every day, with the results published.**

A deliberately small scorecard

Momentum, the 200-day trend, relative strength against the majors, and Bitcoin's on-chain valuation — refreshed daily on completed data only. No 15-indicator mush that flip-flops hourly.

No black box

Open any coin and the score explains itself: every signal that fired and exactly what it contributed. The recipe is our secret sauce — the *evidence* is always yours to inspect.

Bitcoin decides the weather

Smaller coins are only ever bought when Bitcoin itself is in an uptrend *and* the coin is actually beating Bitcoin — rules added after replaying 5½ years of history, where alts quietly ate the profits without them.

Plain-English mode

Every page can explain itself in normal words ("no coin looks worth buying right now — the app is protecting your pot"), with a guided tour and a Simple mode for beginners.

HOW IT WORKS

Signals, a robot with a seatbelt, and receipts

1

Build a watchlist

Start with the 5 strongest coins right now (picked for you) and add any Coinbase pair. Each coin shows its daily verdict — BUY, HOLD, REDUCE or SELL — and why.

2

Let the robot prove it

The auto-trader acts on the signals with **virtual money only**: volatility-sized buys, allocation caps, stop-losses and trailing exits you can see *before* they fire, and alerts by email & Telegram whenever it acts.

3

Check the receipts

Every BUY signal is logged publicly with its 7-day and 30-day outcome — wins *and* losses, downloadable as a CSV — plus a locked model account trading the default strategy live.

Your risk, your dial — the Bitcoin core

One slider decides your style. At **0%**, the robot's exits protect everything — in past crashes it lost single digits while Bitcoin fell 40–60%, at the cost of capturing less of the booms. Slide it up and that share of your pot is held in Bitcoin and **never sold by the robot** — more growth, deeper falls on that slice. The app labels the historical trade-offs honestly; there's no right answer.

Daily signals on completed data

Paper-only — no exchange keys

Email + Telegram alerts

Weekly digest

5+ year backtests, fees included

Public track record

WHY TRUST IT

The track record is public — losers included

Anyone selling crypto signals can show you their winners. Crypto Signal Deck publishes **every** BUY signal its engine fires, what happened 7 and 30 days later, and how that compares to simply holding Bitcoin — on a public page, no login, downloadable as a CSV.

Signal receipts

Each signal row is stamped with the strategy version and configuration that produced it, aligned to completed daily bars, and left in the record whether it won or lost.

A locked model account

A dedicated account nobody can log into — not even us — runs the default strategy live. No manual trades, no tweaks: the benchmark is the product, warts and all.

Honest backtesting

Replay your exact settings over 5+ years of history — after fees and slippage, versus buying and holding — validated on rolling out-of-sample windows, not one lucky stretch.

Honest limits, stated

Paper results flatter real trading. Crypto history is short. Past performance doesn't predict the future. The app says all of this, in the app, next to the numbers.

PRICING

Simple, honest pricing

	FREE	STARTER	PRO
Price	\$0	\$4.99/mo · \$49.99/yr	\$9.99/mo · \$99.99/yr
Watchlist coins	5	10	30
Full signal engine	✓	✓	✓
Email & Telegram alerts	✓	✓	✓
Paper auto-trader + risk tuning	—	✓	✓
Bitcoin core risk dial	—	✓	✓
Premium on-chain feeds	—	—	coming soon

Billed via Stripe · yearly = two months free · refer a friend and you both get a month of Starter · cancel anytime.

Information, not advice — the important part

- **Not financial advice.** Nothing in the app or this document is a recommendation to buy, sell or hold any cryptocurrency. We are not registered investment advisers.
- **Crypto is extremely volatile** — you can lose everything you put in. Decisions are yours alone.
- **Paper trading is a simulation** and typically flatters real results. Past performance — real, simulated, or in the track record — does not predict the future.
- **No real-money trading, ever.** The app holds no exchange keys and cannot place real orders.
